Enjoy, MarcThis invention relates to a method of controlling an exhaust gas purifying device for an internal combustion engine, which uses a NOx catalyst to purify the exhaust gas from the engine. For example, in Japanese Unexamined Patent Publication No. 4-220751, there is disclosed a device in which in an operating range of the engine, in which an air-fuel ratio of air-fuel mixture of a cylinder is lean, an exhaust gas is sent to a three-way catalyst, and the air-fuel ratio is made rich so that NOx can be oxidized by using NOx stored in the catalyst. At this time, because of the rich air-fuel ratio, a rich exhaust gas rich in HC and CO, is sent to the three-way catalyst, so that H_2O and the like are reduced and removed. Also, in Japanese Unexamined Patent Publication No. 4-133931, there is disclosed a method of using a three-way catalyst in which a rich air-fuel ratio is generated in 77a5ca646e
